Spændingskoncentrationer

Valter Yde Daugberg

```
import math
```

```
import kaxe
```

```
Funktion moment(\cdot)
Givet at \mathrm{Dd} = 36/30, så gælder
A = 0.99590
b = -0.23829
\mathrm{return} \ A \cdot rd^b
Funktion torsion(\cdot)
Givet at \mathrm{Dd} = 36/30, så gælder
A = 0.90182
b = -0.22334
\mathrm{return} \ A \cdot rd^b
```

Finder spændingskoncentration σ under moment

 $moment(\frac{1}{30})$

2.239746961862222

Finder spændingskoncentration σ under torision

 $torsion(\frac{1}{30})$

1.92761422971484

```
\begin{aligned} & \text{plt} = \text{Plot}([0,\,0.3,\,1,\,3]) \\ & \text{title}("\frac{n}{d}","K") \\ & \text{mf} = \text{Function}(moment) \\ & \text{Tf} = \text{Function}(torsion) \\ & \text{add}(mf) \\ & \text{add}(Tf) \end{aligned}
```
